

Prescription Treatment[®] brand **960 VECTOR[®]**

Fruit Fly Trap

960 Vector Fruit Fly Trap Activation Instructions:

- 1) Activate the 960 Vector Fruit Fly Trap by pulling the cellophane wrapper off the top of the trap, exposing the food grade liquid attractant. Be careful not to spill the liquid attractant.

- 2) Snap the 10-hole venting cap onto the top and place trap as described below, in section "Trap Placement and Use."

General Information:

The 960 Vector Fruit Fly Trap is scientifically designed to capture *Drosophila* (fruit fly). *Drosophila* require very little debris for successful breeding sites. The 960 Vector Fruit Fly Trap is designed to attract adult fruit flies from short distances. By counting and mapping infestation levels, you can pinpoint specific sources of infestation.

Trap Placement and Use:

- 1) Place the traps in areas where *Drosophila* have been seen. Place the traps where they will not be disturbed or tipped.
- 2) Avoid placing traps over food preparation areas or exposed food to minimize fruit fly activity and attraction in these areas. Human activity in these areas increases the probability of tipping or knocking traps out of position.
- 3) Use supplied glue dots to secure the trap in place.

- 4) Remove the cap to count the number of adults in the trap. If there are a large number of captured flies in a single trap, you may want to strain the liquid for ease of counting.
- 5) Record trap counts on a site map.
- 6) Discard traps after 30 days of use and replace with new traps.

To Apply Adhesive Dots:

- 1) Adhesive dots are positioned between two pieces of paper.
- 2) Peel back one of the wax coated release papers to expose the adhesive dots, leaving the adhesive dots on the other piece of paper.
- 3) Gently press an adhesive dot onto the outer edge of the bottom of a Vector 960 Fruit Fly Trap. You may wish to apply more than one adhesive dot per trap. If an adhesive dot is placed in the center of the trap, it may be necessary to place additional adhesive dots on the outer edge to ensure long term placement.

- 4) Adhesive dots adhere to a wide variety of materials. Some examples include paper, plastic, foil, glass, aluminum, cinderblock, styrofoam, wood and stainless steel.

Always make sure that surfaces are clean and dry in order for the adhesive dots to adhere properly. Some substance, such as moisture, oil, dust, hand lotion and silicone-coated products, may interfere with the bonding quality of adhesive dots.

Common Use Areas:

Traps are most effective when placed near breeding sites.

Place behind or under bars, beverage centers, dishwashers, food displays, food service islands, sinks, ovens, supply racks, vending machines, food preparation tables, etc.

NOTE: *Drosophila* will gravitate toward decaying food odors so it is important to discard all food materials to minimize fruit fly activity in production areas.
