

# GameOn™

Arylex™ active

## SPECIALTY HERBICIDE

Go ahead, tackle those weeds. GameOn™ specialty herbicide features a cutting-edge formulation that provides fast-acting, systemic control of more than 100 broadleaf weeds. GameOn includes new active ingredient Arylex® active, as well as 2,4-D choline and fluroxypyr.

### OVERVIEW

GameOn™ specialty herbicide combines the power of new Arylex® active and 2,4-D choline with proven fluroxypyr. Arylex active is the first member in a new class of synthetic auxin herbicides. GameOn provides consistent control across a variety of climatic conditions. New 2,4-D choline is a unique formulation that significantly reduces volatility and stays where it's applied. It is safe for use on all cool-season grasses, as well as bermudagrass and zoysiagrass in nonresidential turf, including golf courses, industrial sites, commercial sod farms, cemeteries and unimproved turfgrass areas.

New chemistry

Tested and proven safe around trees

Systemic control of more than 100 broadleaf weeds

### At a glance

- **Active ingredients**  
Arylex® active, 2,4-D choline and fluroxypyr
- **Signal word**  
Warning
- **Rainfast**  
Two hours
- **Rate**  
3 to 4 pt./A (depending on the weed or turf type)
- **Low volatility**  
Mitigates off-target concerns
- **Low odor**  
New 2,4-D choline

### Use sites

- Golf courses (fairways, roughs, aprons, tee boxes)
- Industrial sites
- Commercial sod farms
- Cemeteries
- Unimproved turfgrass areas
- **DO NOT** use on residential turf

### Key weeds controlled

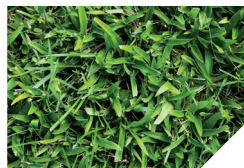

GameOn™ specialty herbicide provides exceptional control of more than 100 high-anxiety weeds, including the key weeds below.

Clover

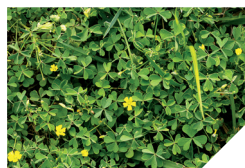

Dandelion

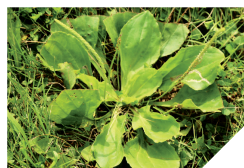

Doveweed

Ground ivy

Oxalis

Plantain

### Turf safety

GameOn™ specialty herbicide is labeled for use on nonresidential cool-season turfgrasses, as well as bermudagrass and zoysiagrass, with no temperature restrictions. To minimize the potential for turfgrass injury on sensitive turfgrasses such as bentgrass and bermudagrass, avoid applications when mowing heights are less than a ½ inch.

### Application flexibility

Unlike other postemergence products, GameOn™ specialty herbicide has no temperature restrictions – which allows applications to be made throughout the day regardless of the temperature. It is rainfast in two hours, meaning the product will still perform even if precipitation occurs two hours after application.

### Application rates

Apply GameOn™ specialty herbicide to small, actively growing weeds for optimum control. It is recommended to apply with a minimum spray of 10 gallons of water or more per acre for uniform coverage and control.

- **For ground broadcast treatment or spot treatment,**  
apply 3 to 4 pt./A.
- **For sensitive turfgrasses (e.g., bermudagrass, bentgrass),**  
apply 3 pt./A.
- **For difficult-to-control weeds (e.g., ground ivy),**  
apply 3.5 to 4 pt./A.

### Thoroughly tested

GameOn™ specialty herbicide features a new formulation of 2,4-D – 2,4-D choline, which is new to turf, has extremely low odor and is significantly less volatile compared with traditional 2,4-D products. For more than three years, tree studies were conducted with Arylex active and GameOn. During those studies, no tree damage was observed.

### ADDITIONAL PRODUCT FEATURES

- GameOn™ specialty herbicide quickly breaks down in soil.
- GameOn can be sprayed in winds up to 15 mph.
- When used with low-drift nozzles, GameOn requires a minimal buffer zone when compared with traditional postemergence products.
- GameOn has been tested and is effective in low-volume spray equipment.
- GameOn is available in a 2.5-gallon container.
