

Nothing Puts You In Control of Sedges Like Dismiss Herbicide

Talking Points for Dismiss vs. SedgeHammer®

- ◆ **SPEED OF CONTROL:** Visible results in 24 - 48 hours & control within a week vs. 2-3 weeks for other products
- ◆ **EXCELLENT UNDERGROUND TUBER MORTALITY**
 - ◇ Dismiss stops more underground tubers from germinating than other competitive products reducing future sedge populations this season and next
- ◆ **BEST-IN-CLASS NUTSEGE CONTROL**
 - ◇ Dismiss will give you the same or better nutsedge control, including perennial and annual sedges, but will do it faster than any other sedge product
 - ◇ Excellent control of green kyllinga
- ◆ **ENHANCES BROADLEAF WEED CONTROL**
 - ◇ Labeled for control or suppression on over 45 broadleaf weeds and grasses

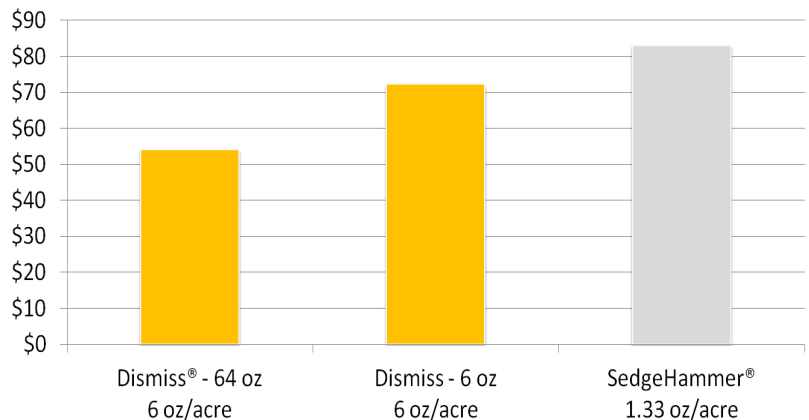

◆ **AVAILABLE IN CONVENIENT PACKAGE SIZES**

- ◇ 6 oz with measuring device & side-view
- ◇ 64 oz for larger volume users

Always read and follow label directions.

Dismiss on Green Kyllinga

Always read and follow label directions.

Nutsedge Tuber Viability

*Plots treated in June. Tubers harvested in November.

Top Left: The 1,000 square foot area pictured is a fairway heavily infested with false green kyllinga. Photo is taken 30 days after initial application in late summer.

Bottom Left: Same area the following spring. The Dismiss treated soil significantly reduced germination of the rhizomes, providing long residual control.
