*Phosphorous acid products are to use as a supplemental fertilizer treatment.

* Upon foliar application, the phosphite ions are taken up directly by the plant foliage and may undergo a degree of conversion to phosphate ions, or will be used directly by plants, as phosphite ions.

*As a soil application to annual crops, a lesser response from the initial crop, with a corresponding superior response from succeeding crops, may be observed. In addition, placement close to seeds or root zones may be injurious to crops. The effect may be aggravated by a soil pH below 6.5.

TANK MIX PRECAUTION

Use caution when tank mixing phosphites with micronutrients unless they are fully chelated or the spray tank pH is reduced as unwanted tank mix interactions and precipitates are possible.
