DIRECTIONS FOR USE

Fairways, Tees, Greens, Lawns, Athletic Fields, and other Turf Areas - apply 0.5 - 2 ounces/1,000 sq ft in sufficient water for thorough coverage (usually 1-5 gallons per 1,000 sq ft). Acre rates: 0.5-2.0 ounces/1000 sq ft = 21.7 oz - 87.1 oz/acre. Three to four applications per growing season are recommended to maintain vigorous turf. Avoid watering for 24 hours after application for optimal results. Application to turfgrass areas by injection into the irrigation system will provide good dilution and distribution. Observe all local regulations while connecting injectors to an irrigation system to avoid contamination of potable water.

Ornamentals - for foliar application, mix 1 - 4 pints in 100 gallons of water and spray foliage to the point of runoff. Best results will occur when the product is applied to actively growing foliage during periods of high humidity and low plant stress. Early morning, late afternoon, or cloudy days are preferable to hot, dry conditions. Avoid watering for 24 hours after application for optimal results.

Do not apply near water, storm drains or drainage ditches. Do not apply if heavy rain is expected. Apply this product only to your lawn, and sweep any product that lands on the driveway, sidewalk or street back onto your lawn.

CAUTION

Spray only on target areas. Staining may occur if diluted spray is allowed to remain on non-target surfaces such as asphalt, concrete, ceramic tile, painted surfaces, stucco, unfinished woodwork, fences, etc. Should accidental contact occur, immediately wash off with clear water.
