#### DIRECTIONS FOR USE

Application timing and rates of **LESCO-Wet Plus** will depend upon the time of year, soil type, thatch depth, and varying local conditions.

**Fine Turf, Lawns, Fairways, Greens, Tees, and Athletic Fields:** Initially apply 4-8 fl. oz./1000 sq. ft. before moisture stress is expected. Use either a conventional sprayer or an irrigation injection system. If sprayed, irrigate treated areas thoroughly to incorporate the active ingredient into the soil solution. Monthly maintenance rate of 1-4 fl. oz./1000 sq. ft. can be applied as necessary.

For existing in-season problems, initially apply 4-8 fl. oz./1000 sq. ft. When used at the highest application rate and in certain weather and soil conditions, a low level of phytotoxicity may occur. Irrigate thoroughly after treatment to eliminate potential for leaf-tip discoloration. The preventative application treatment schedule (above) can then be followed starting 2 to 4 weeks after the initial application.

**Greenhouse, Nursery Stock, and Landscape Plantings:** Apply 8.0 to 16.0 fl. oz. **LESCO-Wet Plus** in 10-20 gallons of water per 1000 sq. ft. Water in immediately following treatment.

**New Nursery Material for Planting:** Mix 32 fl. oz. **LESCO-Wet Plus** per 200 gallons of water. Drench holes or root balls before planting at a rate of 2-3 gallons per foot of ball or hole.

**Increased Fertilizer and Pesticide Penetration:** Add 8.0 to 16.0 fl. oz. **LESCO-Wet Plus** to 100 gallons of spray mixture to increase thatch and soil penetration.

**Nursery and Greenhouse Soil Mixes:** Mix 4.0 fl. oz. of **LESCO-Wet Plus** in 5 Gallons of water. Add this amount to one cubic yard of soil mixture to aid in wetting capacity.

#### STORAGE AND DISPOSAL
