

LESCO® Foam

Foam Marking Agent

PRODUCT INFORMATION

LESCO Foam will produce thick, long lasting foam marks when used with a foam marking machine. This foam will not burn turf when used according to label directions.

APPLICATION RATES

Turf Rates

- Mix 8-12 ounces of Foam per 5 gallons water in the foam tank.
- Foam rates will vary depending upon pesticide and foaming machine used.
- Expanded foam will normally last one to two hours prior to “draining” away.

DIRECTIONS FOR USE

If expanded foam is runny and thin, check hose connections for proper air mixing. Check Foam rate mixed and adjust Foam rates upward if necessary.

Users may calibrate and test their application equipment to determine exact foam dilution rates, expansion volumes, and application coverage. Applicators should check ppm distribution or wood structure absorption to determine if pesticide label rates have been achieved.
