

NO MOW FINE FESCUE MIX

TURF-TYPE FINE FESCUE AND CHEWINGS FESCUE

Highest Germination Rate | Advanced Testing | Unparalleled Standards

FEATURES

- Low maintenance grasses
- Very fine textured
- Bunch type growth habit
- Drought resistant
- Low mature plant height
- Little or no mowing
- Good pairing with wildflowers
- Provides erosion control

AGRONOMIC CHARACTERISTICS

No Mow Fine Fescue Mix is ideal for sites where use of fertilizer is limited or not allowed. No Mow Fine Fescue Mix can be used in full sun to partially shaded areas and is drought tolerant. This mix exhibits excellent color, quick establishment, and weed suppression. Mow once per year in the late summer to remove seed heads.

SUGGESTED USAGE

No Mow Fine Fescue Mix is well adapted for low maintenance turf areas, sloped areas for erosion control, mixed with wildflowers for a meadow effect, shaded areas, and areas where mowing is not possible.

TURF ESTABLISHMENT GUIDELINES

Adequate seed bed preparation is important in new turf grass establishment as well as in overseeding. Check soil pH and apply LESCO Starter Fertilizer prior to seeding. Cool-Season grasses germinate best in the 60° to 85°F (16° to 30°C) soil temperature range. Frequent light irrigation and/or seed starter mulch is required for optimum germination. Germination should be visible within 21 days; complete turf establishment will take three to six months to exhibit mature growth characteristics.

RECOMMENDED MAINTENANCE PRACTICES

No Mow Fine Fescue Mix is eco-friendly as it requires minimal fertilization after establishment and is drought tolerant. No Mow Mix contains long lasting grasses that are winter tolerant and very well adapted to sustainable areas.

ENVIRONMENTAL TOLERANCE

No Mow Fine Fescue Mix is well suited throughout the cool arid and cool humid zones.

INGREDIENTS

70% Hard Fescue
30% Chewings Fescue

SEEDING RATES

New Establishment:

2-3 lb./1000 sq. ft.

Renovation:

1-2 lb./1000 sq. ft.

PACKAGING INFORMATION

50 lb. bag
#20-41-402
Woven Polypropylene Bags
