

OPTIROOT® TALL FESCUE BLEND

TURF-TYPE TALL FESCUE

Highest Germination Rate | Advanced Testing | Unparalleled Standards

FEATURES

- Advanced generation cultivars
- Dark green color
- Heat and drought tolerant
- Shade tolerant
- Disease resistant
- Good winter color
- Optiroot® treated for enhanced germination and establishment

AGRONOMIC CHARACTERISTICS

Optiroot® Tall Fescue Blend will provide a durable turf that will tolerate drought, heat, shade, and traffic. The varieties in this blend contain endophytes to increase resistance to above ground feeding insects. This blend is brown patch resistant and offers excellent winter color. The addition of Optiroot® treatment offers faster germination and turf establishment as well as increased resistance to stress and disease.

SUGGESTED USAGE

Optiroot® Tall Fescue Blend is suitable for golf course roughs, home lawns, athletic fields, commercial turf areas, parks and playgrounds, particularly where irrigation is limited.

TURF ESTABLISHMENT GUIDELINES

Adequate seed bed preparation is Important In new turf grass establishment as well as in overseeding applications. Check soil pH and apply LESCO starter fertilizer prior to seeding. Cool-season grasses germinate best in the 60° to 85° F (16° to 30° C) soil temperature range. Frequent light Irrigation and/or seed starter mulch is required for optimum germination. Germination should be visible within 14 days; complete turf establishment will take two to six months to exhibit mature growth characteristics.

RECOMMENDED MAINTENANCE PRACTICES

Highest quality and durability are reached using moderate maintenance levels. Allow turf to establish prior to heavy use. Mowing height at 2-3" is recommended (lower mowing heights require higher maintenance).

ENVIRONMENTAL TOLERANCE

Optiroot® Tall Fescue Blend is suitable for permanent turf in cool arid and cool humid zones along with higher elevations in warm humid and warm arid zones.
