

900 V3 Hydroseeder

Kincaid's 900 V3 is industry-leading with the ease of most simplistic operational controls, and lack of downtime. With a proven track record of excellent customer service and Kincaid being in business for over 25 years in the hydroseeder market, nobody can compete with the efforts we provide. When it comes to those large residential or smaller-medium sized commercial jobs, there is nowhere else to look other than at the Kincaid 900 V3.

Job Stability

The 900 V3 is built with our customers in mind for lack of downtime and ease of operations. Two levers operate the agitation system and the clutch to engage your pump. Then, with the ease of turning a key for your electric start on your engine and easy access to throttle controls, you can spread mulch in no time. You have the choice on the job to either run your tower gun shooting 90'-100' out or, in just a few short minutes, get your hose reel activated and stretch 150' out to your spray zone. You can select between three provided nozzles for each operation, ensuring that your finished work looks outstanding and provides customer satisfaction every single time.

Ease of Use

With 900 gallons of working capacity, short plumbing, mechanical controls, and two grease zirks, how do you not have ease of operational control while running this hydroseeder? We want you to excel in the field at product efficiency and not have to troubleshoot a piece of equipment. It takes no time to figure out how to control our machine and where those sweet spots are for your liking. If you're ever having trouble, know that Kincaid equipment is here for you and your needs.
