

# Champ® Formula 2 Flowable

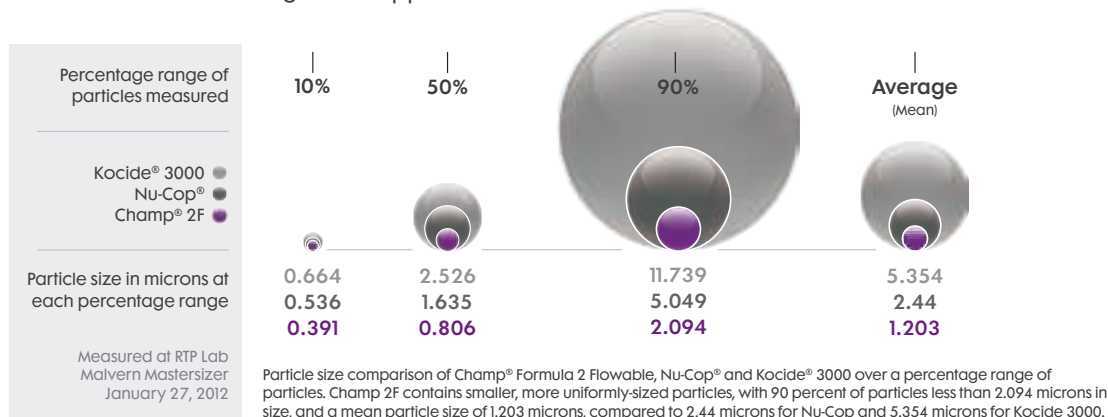

## NEVER SETTLE FOR LESS.

### BETTER COVERAGE.

The key to disease control with copper is coverage – the more uniformly and completely leaf surfaces are covered, the better the performance. Champ® Formula 2 Flowable contains more precisely-sized particles, and more of them. Over 90% of the particles in Champ Formula 2 Flowable are 2.094 microns or less, the optimal size range to cover leaf surfaces and maximize disease control.

### PARTICLE SIZE COMPARISON.

The smaller particle size of Champ Formula 2 Flowable helps maintain suspension during storage and offers better coverage after application.

### BETTER STORAGE AND MIXING PROPERTIES.

We've spent three years refining the blend of polymers, surfactants and other inerts to perfect an easy-flowing, fast mixing formulation. In extreme condition tests, Champ Formula 2 Flowable, stored for more than a year at temperatures that vary weekly from 5° to 105° F, still mixes and pours like the day it was formulated. No other flowable copper can do that. And once it's time to use Champ, it 'blooms' instantly and mixes uniformly with minimal agitation.

Champ Formula 2 Flowable formulation easily disperses with mild agitation.
