What are Superabsorbent Polymers?

Definition

Polymers

- Polymers are macromolecules formed from smaller structural units (monomers).
- Monomers are molecules of low molecular mass which, from the polymerization reactions, come to generate the polymeric macromolecule.

Superabsorbent Polymers

- The superabsorbent polymer can absorb and retain extremely high quantities of a liquid in relation to its own mass.
- Polymers that absorb water, which are classified as hydrogels. They absorb aqueous solutions by bonding hydrogen with water molecules.

What are Superabsorbent Polymers?

Absorbent vs. Superabsorbent

Absorbent

Fiber

- The liquid is often kept mainly on the surface or in cavities/empty spaces
- The liquid is released when pressure or high temperatures are applied
- Poor stability

Superabsorbent

STOCKOSORB® 660

Absorbs and releases water to plants

- The liquid is mainly kept within its molecular structure
- Does not release the liquid under pressure
- It is designed to release water to plants
- Stability (absorption and desorption cycles)

What are Superabsorbent Polymers?

Applications (examples)

Absorbent

- Sponge
- Paper
- Plantation fiber
- Cellulose fiber
- Cotton
- Towel

Superabsorbent

- Water retention for plant supply
- Controlled release of insecticides and herbicides
- Fire retardant
- Dust control on dirt roads
- Artificial Snow
- Diapers

Hydrogel:

An efficient tool to achieve high productivity

Why use Superabsorbent Polymers in the planting of different crops?

Decrease in plant mortality rate

Plants hydrated for a longer period

Greater root development

Plants with a better development, consequently higher productive potential

With STOCKOSORB®

Without STOCKOSORB®

Why use **Superabsorbent Polymers** in the planting of different crops?

Possibilities of applications

Pre-Hydrated

Via Irrigation

3rd Planter Box

Mix with Fertilizer

GREEN SOLUTIONS AG LTD

Hydrogel:

An efficient tool to achieve high productivity

Why use Superabsorbent Polymers?

Water Stress

- Less resistance to drought
 - Difficulty of development
- Plant more susceptible to attacks of pests and diseases
 - Lower production potential
 - Shallow roots
- Lower formation and development of secondary roots

High Productivity

- Drought resistant plant
- Sturdy plant
- Higher resistance to pest and disease attack
- Greater production potential
- Greater development of roots and deeper roots
- Greater formation and development of secondary roots

STOCKOSORB® 660

Description

STOCKOSORB® 660 - Is a homopolymer based on acrylic acid and potassium (does not contain acrylamide).

It is a water-insoluble superabsorbent, cross-linked and partially neutralized with potassium.

This product has been specially designed for use in agriculture

STOCKOSORB® 660 - Is a soil conditioner specifically designed and developed for water and nutrient retention in soil

The water absorption capacity of **STOCKOSORB® 660** is determined by the quality of the water and the type of soil. Therefore, the water holding capacity in the soil varies between **150 to 300 times its weight**.

STOCKOSORB® 660

Top 10 Benefits

1. Improves water and nutrient storage capacity in the soil
2. Increases the availability of water and nutrients for plants
3. Enables reducing the frequency of irrigation
4. Improves water infiltration and decreases runoff
5. Reduces soil erosion and fertilizer leaching
6. Improves the survival rate of plants
7. Promotes uniform plant growth and development
8. Promotes greater root growth
9. Greater stability in production
10. Higher productivity

STOCKOSORB® 660

Particle Sizes

STOCKOSORB® 660 is available in different particle sizes for recommended applications and available equipment:

Product	Particle Size (mm)	Recommended for
STOCKOSORB® 660 XL	2.0 - 4.0	E.g. in combination with granular fertilizer
STOCKOSORB® 660 (Medium)	1.0 - 2.5	E.g. landscaping (grass), direct application on soil, soil amendment
STOCKOSORB® 660 (Micro)	0.1 - 1.0	E.g. forestry
STOCKOSORB® 660 (Powder)	< 0.2	E.g. bare root plants

STOCKOSORB® 660

Ecotoxicology

STOCKOSORB® 660 is environmentally safe

Ecotoxicological tests were performed in laboratories certified according to the rules of "Good Laboratory Practices (GLP)".

There is no evidence of adverse effects of **STOCKOSORB® 660** on animals, plants, soil or groundwater.

Thus, **STOCKOSORB® 660** is **non-toxic** and environmentally safe, as it will not contaminate plants, soil or groundwater.

GREEN SOLUTIONS AG LTD
AGRICULTURE & HORTICULTURE SOIL SOLUTIONS

Hydrogel:

An efficient tool to achieve high productivity

STOCKOSORB® 660

Ecotoxicology

STOCKOSORB® 660 is susceptible to mechanical, physical, chemical and biological degradation

Will be degraded to safe products such as: potassium oxide, carbon dioxide and water

The degradation occurs without any negative or toxic effect to the soil and/or microorganisms.

GREEN SOLUTIONS AG LTD
AGRICULTURE & HORTICULTURE SOIL SOLUTIONS

Hydrogel:

An efficient tool to achieve high productivity

STOCKOSORB® 660

Positive Effects

Increases the survival rate during the establishment of crops

Reduces surface water runoff and soil erosion

Enables reducing the frequency of irrigation and consequently the costs with irrigation

Enables strong and healthy growth of plants and roots, growth under hot and dry conditions

Increases the quality and quantity of the crop production

Prevents loss of water and nutrients by deep percolation and nutrient leaching

It has available potassium for the plant (~20% K2O)

Improves soil structure, water retention capacity available in the plant, aeration balance and soil structure

Increase of CEC (Cation Exchange Capacity) in the micro-region where it is applied ($3.100 - 5.100 \mu \text{cm}^3$)
