LIQUID BONSAI FOOD

LIQUID FERTILIZER FOR BONSAI TREES

~~~~~ BONSAI IS PROOF ~~~~~  
~~~~~ THAT SIZE DOESN'T MATTER ~~~~~

LIQUID BONSAI

NOURISHMENT FOR STRENGTH & VITALITY

This bonsai food is perfect for beginners and experienced growers alike. Packed with the nutrients that bonsai trees need to grow thick and strong, our liquid fertilizer ensures gentle feeding and nourishment. Now let's get growing!

HOW TO USE

Mixing & Timing

Use Bonsai Food every watering following the mixing instructions below /// **SHAKE BOTTLE WELL BEFORE EACH USE**

GALLON MIX

1 capful (1/2 tablespoon)
per gallon of water

LESS IS MORE! Do not use more plant food than the stated dilution rate.

During winter, dormancy sets in and bonsai trees need time to rest—Reduce feeding to one to two times a month using the mix rate above.

Water & Application

Use filtered, bottled, or rainwater for best results.
Unfiltered tap water often harms plants and stunts growth.
Use a clean container to mix and apply solution.

When To Water

Underwatering is the number one cause of bonsai tree problems. Bonsai soils are prone to drying out quickly since they're so shallow. Water when the top layer of soil appears dry. Aim to saturate the root system by watering until water runs through the drainage holes. Watering frequency depends on the type and size of your tree, so assess daily and rely on visual cues rather than sticking to a rigid schedule.

Overwatering can also damage your bonsai tree: Symptoms include yellowing leaves and shriveling branches.
