CONTRACTED TO BE HIGHER QUALITY THAN BLUE TAG.

CERTIFIED (BLUE TAG) SEED IS AN ASSURANCE BY A GOVERNMENT AGENCY THAT:

- ▴ The turfgrass seed varieties have unique characteristics that are stable through many years of growth.
- ▴ Varietal integrity has been maintained through the planting, growing, harvesting, cleaning and blending process.
- ▴ The finished seed product meets quality standards set by the certifying agency.

Many of our seed products have a Blue Tag on the package – insurance that these standards are met. All of our turfgrass seed is selected, produced, harvested and blended with the following standards:

- ▴ Our seed varieties are selected from top turf breeding programs to meet the needs of our customers. All of our seed varieties are submitted to at least one cycle of testing in the National Turfgrass Evaluation Program, as well as regional University trials.
- ▴ We double test all seed lots to be free of UGS [undesirable grass seeds] including the absence of *poa annua*.
- ▴ We arrange production directly with seed growers under contracts that demand higher quality standards than Blue Tag seed.

THE SEED LABEL

Regardless of variety, every bag of seed has something you don't want to miss – the label. This simple piece of paper tells you everything you need to know about the content and quality of the seed in the bag.

1. Shipper's name and address required on all seed labels.

2. **LOT NUMBER** indicates:

- Location where product was blended
- Year of production
- Sequence of blend

Lot number can be traced to original component tests and history. [Seed labeler must have this information on file.]

3. **% PURITY** by component is determined by the following formula: component % by weight x purity on official component seed test. The total of all component purity figures added together is the total purity of the blended product.

4. **% GERM** is the germination % of each component. LESCO® has a policy: maximum labeled germination of 90%, even if test shows a higher number. This allows for regulatory testing variances.

5. **ORIGIN** indicates the state [or country outside United States] where seed was grown.

6. **OTHER INGREDIENTS** is an important section of the seed tag.

OTHER CROP SEEDS: indicates % content of seeds from any agricultural crop other than listed components.

INERT MATTER: indicates % content of chaff, stems or other product that is not seed.

WEED SEED: indicates % content of seed not defined by component or other crop %'s.

7. **NOXIOUS WEEDS** indicate any seeds found [and count per lb.] that are defined as noxious or as undesirable grasses by state or federal law.

8. The **DATE TESTED** is the month and year of the last completed germination test. Regulations state that there must be a valid, complete germination test with this date. Laboratory germination tests can take up to 28 days to complete. It is not legal to update a seed tag without an updated test. LESCO® always has a germination test completed to correspond with the date tagged.

BLUE TAG CERTIFIED

KENTUCKY BLUEGRASS AND PERENNIAL RYEGRASS FAIRWAY MIXES

We offer fairway mixes comprised of elite Kentucky bluegrass and turf-type perennial ryegrass varieties that are in the top tier of the NTEP turf quality trials. We use varieties that rate well when mowed at .4-.6 inches under high maintenance practices. These varieties also have high scores for genetic color, disease resistance and establishment.

Our elite turf-type perennial ryegrasses are traffic tolerant with improved mowing qualities due to their upright and dense growth habits. These advanced generation ryegrasses are resistant to gray leaf spot.

TURFGRASS ROUGH BLENDS AND MIXTURES

The improved turf type Kentucky bluegrasses, tall fescues, fine fescues and perennial ryegrasses used in LESCO® rough blends and mixtures show improved shade and drought tolerance. All components are improved turf type varieties and have NTEP performance data.

Other seed blends and mixtures available containing turf-type tall fescues, Kentucky bluegrasses, and turf-type perennial ryegrasses. Ask your sales rep for details.

FAIRWAY MIXTURES	KENTUCKY BLUEGRASSES	PERENNIAL RYEGRASSES	FESCUES

LOOK FOR THE BLUE TAG!

Golf course care—and play is all about the turf. Selecting the right seed for your course is one of the most important decisions a superintendent can make. That's why you want to be sure to look for Blue Tag certified varieties, whenever possible.

Each state has a seed certifying agency verifying the genetic purity of seed grown in that state. Buying Blue Tag certified seed gives you the added confidence that the seed you get is exactly what you bought and it carries all of the performance characteristics you are looking for. Plenty of issues arise for you to worry about each day. The quality of your seed doesn't have to be one of them.

BENTGRASS & BLENDS

Wherever You Are, We Have The Turfgrass Seed You Need To Succeed.

SiteOne offers a wide selection of bentgrass varieties that include our own exclusive proprietary varieties as well as popular varieties from Tee2Green and other seed companies.

CREEPING BENTGRASSES

Whether you're looking for the latest and greatest offering like Authority, or proven winners from Tee2Green, we have the bentgrass seed for your course. Carrying top NTEP scores and suitable for a range of uses all the way from tee to green, our bentgrasses cover courses worldwide. Superintendents particularly appreciate their upright growth habit and increased density.

CUSTOM BLENDS AND MIXTURES

We can meet specific requirements using our broad selection of elite turfgrass varieties in your custom seed blend or mixture. Mowing height, maintenance level, disease resistance, stress tolerance, color and density all can be evaluated when creating a custom seed mix from our variety list.

All of our varieties have NTEP ratings to assist selection. We also offer different package sizes, from 10# bags to bulk 1000 lb. bags. Apron treatment (for pythium control) and Blue Tag certification are available.

VARIETIES AVAILABLE FOR CUSTOM SEED BLENDS AND MIXTURES

OVERSEEDING & BERMUDA GRASS

Your Course Is Unique, So Are We.

OVERSEEDING [DORMANT BERMUDA GRASS]

Our overseeding products offer quick establishment, rich green color and good spring transition qualities. We offer a unique line of Perennial ryegrass varieties that contain little or no endophyte which allows Bermuda grass fairways to regenerate quickly in the spring. Our overseeding line includes three way perennial ryegrass blends, intermediate [annual x perennial] ryegrasses, and Pro Am Poa Trivialis; Apron seed treatment [for pythium control] is offered on all products. Bulk bags containing 1000 lbs of seed are also available.

BERMUDA GRASSES

Our improved varieties of Bermuda grass seed are suitable for fairways and roughs. Sunsport can be used for repair on existing fairways. Sunstar is very good for use in roughs with quick establishment and aggressive growth habit.

We also offer Riviera Bermuda grass and Princess 77 Bermudagrass [the only hybrid seeded Bermuda grass] subject to availability.

All of the improved Bermuda grasses can be mowed from ½ to 1½ inches. All varieties we offer have NTEP trial data, and have shown good cold tolerance in the northern half of the Transition Zone.

OVERSEEDING PRODUCTS

BLENDS & MIXTURE apron treatment available	Double Eagle Blend: Premium 3-way blend of quality turf-type perennial ryegrasses Overseeding Eagle Blend: 3-way blend of turf-type perennial ryegrasses with dark green color, quick establishment and good transitioning ability Pro Blend: 70% turf-type perennial ryegrasses, 30% intermediate ryegrass Pro Blend II: 70% intermediate ryegrass, 30% turf-type perennial ryegrass Double Eagle Plus Pro Am: 80% Double Eagle Blend, 20% Pro Am Poa Trivialis

GRASSES & WILDFLOWERS

Take A Walk On The Wild Side.

The right plant for a golf course isn't always a blade of turf that can be maintained at a half-inch height. Native grasses and wildflowers play a critical role as well. Whether you are looking to develop a distinctive look, reduce maintenance demands, or just go wild we've got the right seed.

NATIVE GRASSES

You know you have found the seed experts when you find a menu of native grasses like ours. Each of our native grass mixes features a combination of at least four different varieties to provide you successful planting regardless of your geography. Short or tall, North or South – we are your source for native grasses.

WILDFLOWERS

Superintendents from New England to the West Coast use our wildflower seeds to create a splash of color, add a distinctive texture, or provide a more diverse ecosystem on their courses. Our full line of seed ensures you can find the mix for your part of the country so you get the look and long-term performance you need.
