

ATRIMMEC®

PLANT GROWTH REGULATOR

Cut Costs and Increase Profits

WHAT IT IS

Atrimmec® Plant Growth Regulator is a systemic plant growth regulator that works by blocking the plant hormones that stimulate growth. Applied to shrubs, hedges, trees, and groundcovers, Atrimmec reduces trimming and pruning labor by 50% or more, and can improve the appearance of landscape ornamentals. It's labeled for bark banding and soil drench applications, and a single application of Atrimmec can prevent undesired fruit for the season on certain landscape trees.

WHAT IT DOES

Atrimmec:

- Regulates growth of listed hedges, shrubs, trees, and groundcovers
- Reduces labor
- Keeps plants looking trimmed longer
- Promotes a fuller, more uniform shape
- Reduces nuisance fruits

Labeled for use on:

- Ivy (Algerian, English)
- Forsythia (Spring growth)
- Juniper
- Ornamental Olive
- Glossy Privet
- Multiflora Rose
- Other listed trees, shrubs, hedges, and groundcovers

Ideal for use on:

- Residential landscape sites
- Commercial landscape areas
- Nuisance fruit trees
- Landscape ornamentals
