MATERIALS:

- A. Turface Mound Clay Elite is a naturally occurring soil-clay product..
- B. Product Specification: Mound Clay Elite is a clean, dry clay that is grayish brown in color having a yield of 1.75 tons per cubic yard and possessing the following particle size analysis:
 - a. Total sand content shall be 5-15 percent.
 - b. The overall clay content shall be greater than 50 percent.
- C. Installation: Install material in lifts of 2 inches and compact with a vibratory device until an optimum compaction between 90 percent and 95 percent is achieved.

Scarify the surface to facilitate bonding of the next lift and repeat until finish grade elevation is achieved. Completing this process as described will minimize settling and improve the performance of the product.

Amount of material required for installation will be determined by specifications of the mound or plate area being constructed.

Please consult manufacturer or distributor representative for specific instructions.
