

Chemical Resistant Bib-Style Aprons

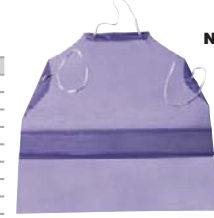

Economy Chemical-Resistant—VR® polyolefin aprons resist industrial concentrations of hydrofluoric, hydrochloric, sulfuric, and nitric acids and are FDA Approved for indirect food contact. Vinyl aprons resist oils, fats, and chemicals. Urethane aprons offer lightweight comfort and long wear. PVC and PVC blends aprons provide superior flexibility and resist grease, fats, oils, punctures, and abrasion. Nitrile aprons are resistant to oil, fuel, and hydrocarbons.

Premium Chemical-Resistant—SBR rubber aprons are abrasion resistant and protect against mild solvents, chemicals, and acids. Neoprene and Hycar aprons protect against a wide range chemicals, acids, oils, grease, and animal fats while maintaining flexibility over a wide temperature range.
