Refer to the APPLICATION RATE TABLE for recommended amount to use.  
 \*After planting bedding plants and before this product is applied, area to be treated should be watered sufficiently to pack soil around roots. This product may be used on plant species not listed on this label. The suitability for such uses should be determined by treating a small number of such plants at the recommended rate. Treated plants should be evaluated 1-2 months following treatment for possible injury. THE USER ASSUMES RESPONSIBILITY FOR ANY CROP DAMAGE OR OTHER LIABILITY. Do not treat plants grown for food or feed. Do not use treated plants for food or feed.

## APPLICATION RATE TABLE

For pre-emergence control of the weed species listed using broadcast spreader equipment, apply LESCO PRE-M 1.5% Plus Fertilizer at the following rates:

Length of Control	Pounds required to treat one acre	Pounds required to treat 1000 sq ft
Short Term (2-4 months)	133 lb	3.1 lb
Long Term (6-8 months)	267 lb	6.1 lb

Rate settings for a specific type of spreader device must be determined by applicator. To deliver the proper rate (3.1-6.1 lb/1000 sq ft) calibrate prior to application of product.  
 One bag (50 lb) will cover 1/3 acre (16,130 sq ft) at a rate of 3.1 lb per 1000 sq ft.  
 The efficacy of this product will improve if the application is followed by one-half inch of rainfall or its equivalent in sprinkler irrigation. If This product is not activated by rainfall or irrigation within 30 days, erratic weed control may result.  
 This product will not control established weeds.  
 If weeds should develop prior to activation of herbicide, shallow cultivate to destroy existing weeds or, where practical, remove by hand. When cultivating for any reason, it should be shallow. This product may be used before or after applications of herbicides registered for post-emergence use (i.e. Roundup or Finale) for the control of established weeds. Do not apply sprays containing Roundup or Finale over the top of desirable plants. A LESCO PRE-M 1.5% Plus Fertilizer treatment may be followed by any registered herbicide to control weeds not listed on this label.

## WEED SPECIES CONTROLLED

This product is recommended for pre-emergence control of the weed species listed. Applications can be made around and over the top of the ornamentals and to the sites listed on this label.
