

TruMelt 3% Magnesium

Recommended Uses | Asphalt driveways and parking areas ♦ Safer around pets and turf

PROS

- ♦ Economical
- ♦ Safer for user, pet and vegetation than calcium based products

CONS

- ♦ Melts effectively only to 0° F
- ♦ Greater risk of concrete damage

Melting Performance	0°F
Concrete Protection	Fair
Slip and Fall Safety	Fair
Free Flowing	Best
User, Turf and Pet Friendly	Good
Clean and Non Tracking	Good
Packaging	50-lb bags, 56 bags/skid

Product Performance

TruMelt™ 3% is a premium blend of 97% oven dried, screened sodium chloride and 3% magnesium pellets. Snow fighting professionals that are looking for full disclosure of ingredients, need look no further. TruMelt™ is true to its name. We disclose the truth about ingredients and true effectiveness. TruMelt™ 3% is the economic choice for commercial and residential applications. Due to the inclusion of 3% magnesium pellets, it melts effectively down to 0°F.

TruMelt™ 3% is screened to optimal crystal size for maximum traction and accurate spreading. Small dusty fines and large crystals above ¼ inch in diameter are removed. TruMelt™ is more free flowing than any ice melter on the market and provides a clump-free product for ease of application. TruMelt™ 3% is very lightly tinted with a non-staining organic (biodegradable) green colorant to enhance accuracy and visibility. It is non-staining and safe for sidewalks and floors.

TruMelt™ 3% is safer on concrete surfaces than just pure salt. With 3% magnesium pellets, the melting point is about 15 degree lower than pure salt and reduces freeze/thaw cycles above 0°F.

However, for greater protection of concrete surface, use TruMelt™ 12% or TruMelt™ 20%. In addition, TruMelt™ 3% is safer for pets and turf than calcium based products. If applied at recommended rates, it will not burn vegetation or pet paws.
