GENERAL PRODUCT DESCRIPTION

LESCO Rain-ject™ is a unique blend of soil active surfactants specially formulated for applications through irrigation systems. Monthly applications of LESCO Rain-ject prevent and correct conditions of soil water repellency, improving the penetration and uniform distribution of water into the root zone of plants. LESCO Rain-ject may be applied with most fertigation programs, and is ideal for use in growing regions where turf professionals seek to optimize water conservation practices.

DIRECTIONS FOR USE

LESCO Rain-ject performs best when applications begin early in the growing season prior to environmental conditions that produce plant stress. Apply on a monthly basis or as needed throughout the growing season.

Preventative and Maintenance program: Inject 20 to 24 fl. oz. per acre (1.5 to 1.8 L per hectare) monthly throughout growing season.

Curative program and Difficult-to-wet areas: Inject 24 to 44 fl. oz. per acre (1.8 to 3.2 L per hectare) monthly or as needed.

STORAGE AND DISPOSAL

Keep from freezing. Do not re-use empty container. Safety goggles are recommended when handling the concentrate. If product is spilled, contain and absorb with inert material. Dispose of in accordance with local, state, and federal regulations.
