Finished Rewind = 4

**STEP 1:** Turface All-Purpose Clay is pre-moistened and ready to use directly out of the bag. If an open bag has dried out, add moisture to rehydrate. Proper consistency should be moist enough to pack without sticking to your tamp or shovel.

**STEP 2:** Cut down any high spots with a sharpened rake. Sweep loose material from the holes with a broom. Holes must be very clean so the new All-Purpose Clay will bond to the old clay. With a watering can, moisten the bottom and sides of the holes. Do not leave puddles in the holes.

**TAMP:** If possible, tarp the mound and batter's boxes to keep the All-Purpose Clay at the optimum moisture level and to prevent the topdressing from washing off the All-Purpose Clay areas.

**STEP 3:** Add enough All-Purpose Clay to the hole so that you are left with a layer of material above the surface. Pack using a tool that is smaller than the hole itself (e.g., hammer, handle of your rake).

**STEP 4:** Add another layer of All-Purpose Clay and tamp solid using a hand tamp. Shave off any high spots.

**STEP 5:** Sprinkle water on the area and cover with a layer of infield mix, tamp, and top with Turface MVP or Pro League to match the color of your infield.

### HOW TO MAINTAIN YOUR MOUND, BATTER'S AND CATCHER'S BOXES

**STEP 1:** Excavate the front slope of your mound to a 4" to 6" (10.16 to 15.24 cm) depth.

**STEP 2:** Make sure the pitching rubber is square, level, the proper distance from home plate and the correct height.

**STEP 3:** Moisten the bottom of the hole with water. Spread an inch (2.54 cm) of Turface All-Purpose Clay and with a rake, cut into the soil for proper bonding. Tamp firmly. Lightly moisten but do not drown, and tamp again.

**STEP 4:** Evenly add an inch (2.54 cm) of new All-Purpose Clay to the area you are working. Tamp until firm. Moisten the area lightly, but do not drown. Repeat STEP 4 (1 inch (2.54 cm) of All-Purpose Clay, spread, tamp, water). As you near the last layer, reduce the amount of water you add to the All-Purpose Clay.

**STEP 5:** As you reach the top of your All-Purpose Clay area on the mound, use a rake to rough grade the slope in front of the mound. Tamp or roll the slope for a smooth surface. Check the slope of the mound for accuracy with a slope board. Add All-Purpose Clay to any low spots and use your rake to cut down the high spots. After leveling, tamp or roll again.

**STEP 6:** Add a final coating of water on the All-Purpose Clay areas once all grades and slopes are set and rolled. Finally, cover all All-Purpose Clay areas with your infield mix and top with Turface MVP® or Pro League® to match the color of your infield.

### BUILDING YOUR PITCHING MOUND, BATTER'S AND CATCHER'S BOXES

**TOOLS REQUIRED:** Tamp, rake, shovel, broom, watering can and a slope board for the mound.

**EASY STEPS TO SAFE AND DURABLE PITCHING MOUNDS AND BATTER'S BOXES**

As part of its lineup, Turface also manufactures Professional Mound Clay and MoundMaster Blocks creating a complete line of products for firm, reliable footing for pitchers and batters.

### FOR MOUND, PLATE & INFELD MANAGEMENT

Turface® All-Purpose Clay® is an affordable alternative packing clay that is easy to use for mound and plate management. Turface All-Purpose Clay is also an excellent additive to soft, sandy areas of the infield to firm them up for safer footing and consistent ball hops. Turface All-Purpose Clay outperforms other products in its class.

As part of its lineup, Turface also manufactures Professional Mound Clay and MoundMaster Blocks creating a complete line of products for firm, reliable footing for pitchers and batters.
