

# Vision Pro™ HD

High Definition Turf Colorant

## General Description

Vision Pro™ HD represents the next generation of Green Lawngr® brand turf colorants defined for use in golf course applications. Intended to complement the highest performance expectations of spray applications by golf course superintendents and turf professionals, Vision Pro HD can be used alone or in combination with plant health and conventional plant protection programs.

Unlike other products that leave behind a less appealing blue tone color, Vision Pro HD remains consistently green for the duration of the application period. The result is the most natural appearance of turf color.

The technology of Vision Pro HD means no adverse effects or breakdown associated with UV light, no plant phytotoxicity, and easy clean-up of spray equipment. Vision Pro HD may be applied with professional spray application equipment using the existing seals – no seal changes are required.

Add Vision Pro HD to all your greens and tees spray programs and let the pride in your turf quality show for itself.

## Directions for Use

Shake well before use.

For optimal appearance, apply bi-weekly or as often as spray solution applications are made on the greens and tees.

For best results, use low to medium sprayer pressure. Avoid overspray on concrete, masonry, or any other objects where color is not desired, otherwise permanent staining may occur. Accidental overspray may be removed by a water rinse prior to drying.

## Packaging

Available in 4 x 1 gallon jugs.

## Recommended Rates

Flexibility in usage rate is reserved for the applicator to achieve the custom look desired.

Use Vision Pro HD alone or in spray mix combinations from 16 to 32 ounces per acre.

## Tank Mix Combinations

1. Fill sprayer tank one-half to two-thirds the volume of water, and begin agitation.
2. Following the standard order of addition, add Vision Pro™ HD after dry flowable/ dispersible granules and before water-soluble pesticide formulations.
3. Allow Vision Pro HD to fully disperse and mix into the spray solution before adding additional pesticides.
4. Add water to reach final solution volume.
5. Apply pesticide solution mix to target site at rate specified by pesticide manufacturer consistent with the product label. **ALWAYS FOLLOW THE PESTICIDE PRODUCT LABEL.**
6. After application, clean sprayer tank as per the pesticide manufacturer's label.

## Equipment Cleaning

After application, always drain and clean the sprayer tank, pump, hoses, valves and nozzles as instructed by the pesticide manufacturer's label.

- After initial rinsing, the use of a tank cleaner, such as Nutra-Sol® spray tank cleaner, Neutralize™ tank cleaner or Neutralize OH- tank cleaning agent will facilitate additional removal of pesticide residue from equipment.
- Do not leave pesticide mix solutions with Vision Pro HD colorant in the sprayer tank overnight.
- Dispose of rinsates as per local, state, and federal regulations.

Always read and follow label directions.
